71 287 8603 Each

'Kogelan Hypersoft' soft balls

Extremely soft, air-filled balls made of a special Kogelan compound material. The Hypersoft series is extremely popular in nurseries and primary schools due to the balls' particularly soft surfaces. Similar to foam balls, Hypersoft balls are gentle and don't hurt if a catch is missed or a ball hits the body – but they are more robust and have better bounce and flight characteristics. Perfect for use in goal-keeper training for football and handball as well as for beginner's volleyball. The balls offer excellent grip – an advantage that is clearly noticeable in handball and dodgeball. Pressure can be adjusted via a needle valve. The less air is in the balls, the less they bounce. Suitable for indoor and outdoor use.

See table for available versions.
